

As the body of climate litigation grows, judges must consider complex scientific and legal questions, many of which are developing rapidly.

The Climate Judiciary Project (CJP) offers:

- A science-based curriculum developed by leading climate scientists and legal experts.
- Objective, neutral seminars, courses, and educational programs for the judiciary.
- A network of world-renowned climate scientists and judicial leaders.

Since 1990, the Environmental Law Institute has built environmental rule of law in the United States and worldwide by supporting the capacity of the judiciary to play its role in applying the law to environmental challenges.

ELI's Climate Judiciary Project (CJP) is collaborating with leading national judicial education institutions to meet judges' need for basic familiarity with climate science methods and concepts. Specifically, CJP is developing and disseminating a Climate Science and Law for Judges curriculum and is conducting seminars, courses, and educational programs to provide neutral, objective information to the judiciary about the science of climate change as it is understood by the expert scientific community and relevant to current and future litigation.

We invite you to visit CJP's newly launched resource website to learn more about the legal and scientific issues in climate litigation of today and tomorrow. While the website offers a rich mix of curriculum materials, reports, and other resources for use by judges and their staffs, the website is useful for all who have an interest in learning about the facts of climate science, climate change, and the body of law that is emerging in this new area of jurisprudence.
